

TurboRegime — A Risk Management Framework designed to provide a disciplined, hassle-free way for money managers, advisors and retail investors to seek a market advantage when conditions are favorable while reducing drawdown during periods of elevated risk.

Build a Tactical Sleeve 100% under your control

Individual investors and family advisors can use smartTrade, a client-side application, to automate trades while retaining complete control of their accounts. One scheduled decision near the close supports a repeatable, unemotional process.

Money managers can receive the TReg allocation payload as an input to an existing tactical portfolio sleeve. Historically, TReg has rebalanced about 2–3 times per month using three highly liquid ETFs: SPY, SHV, and SPXL.

smartTrade currently interfaces with the IBKR API, with support for additional brokerage platforms—including E*TRADE, Charles Schwab, and Alpaca—in development.

Three Regimes / Three ETFs / Three Allocations

RiskOff reduces equity exposure, while **RiskOn** increases market participation; both regimes remain partially invested in equities and Treasuries. **RiskOn++** (Turbo) adds selective leveraged exposure when stronger market conditions meet the model's criteria. A Meta Filter establishes framework guardrails and guides dynamic allocation among SPY, SHV, and SPX, using proprietary measures of equity strength, compression, and risk.

*Historical Backtest – CAGR Performance vs. SPY

TReg delivered higher historical returns with a smaller maximum drawdown.

Metric	TReg	SPY	Delta
Total return	4,835.9%	1,008.6%	3827.3%
Annualized return CAGR	24.3%	14.4%	9.9%
Maximum drawdown	–23.9%	–33.7%	9.98%
MAR ratio CAGR ÷ maximum drawdown	1.02	0.43	0.52

*Historical Backtest - Rolling Window Performance vs. SPY

TReg outperformed SPY in every tested rolling window of 5-10 years.

Rolling Window	TReg Average CAGR	SPY Average CAGR	TReg Annualized Alpha vs SPY	TReg Cumulative Advantage vs SPY	Win%
1 yr	26.3%	15.7%	+10.6%	+10.6%	79.9%
3 yrs	23.1%	14.3%	+8.9%	+39.0%	92.7%
5 yrs	22.9%	14.0%	+8.9%	+89.3%	100.0%
10 yrs	23.0%	13.7%	+9.3%	+434.8%	100.0%

**Trade Performance vs Historical Backtest

Published TReg trade returns continue to track the historical backtest closely — a difference of just 0.2% so far.

Trade Return	Backtest Return	Return Difference	SPY Return	Alpha
32.1%	32.3%	–0.2%	18.9%	13.2%

*Historical Backtest Results are generated by TurboRegime (11/5/2008 – 10/2/2026, since inception of SPXL)

**Trade Performance (since 4/1/2026, 18 live trades) comes from broker account balance records captured on day of trade. Signal timing and reported performance can be independently reviewed using published trades performance data disclosed on our website. Trade performance includes trading costs, fees, and slippage.
